LASERSHIELD® INSTANT SECURITY SYSTEM NOW AVAILABLE NATIONWIDE
First "Plug & Go" wireless monitored security system

Las Vegas—Jan. 2, 2007—LaserShield Systems, Inc. announced today that the **LaserShield Instant Security System** is now available nationwide through CompUSA stores and CompUSA.com. LaserShield is the first affordable plug-and-go security system featuring a 105-decibel alarm and professional 24/7 monitoring. The product is ideal for homes, apartments, dorm rooms, storage facilities, and all types of offices. The Company will demo the system at the 2007 International Consumer Electronics Show in Las Vegas from January 8th - 11th.

"LaserShield has become a top seller," explained Brian Woods, executive vice president and general merchandising manager, CompUSA. "Our customers are pleased to be able to purchase an all-in-one system activated within minutes in the store—and one as simple to setup as a cordless phone. They rest assured that now they have a proven, affordable security system with which to safeguard their families."

The \$199.95 starter system includes a master alarm unit, a wireless motion detector and two keychain remotes. Customers can activate Rapid Response Monitoring Service on the day of purchase for \$19.95 on a month-to-month basis with no long-term contracts or commitments.

The master alarm unit is up and running in minutes after a customer plugs it into a telephone jack and standard wall outlet. Motion detectors are placed in areas that an intruder would need to pass in order to enter the property. Each wireless motion detector protects a room up to 35 X 35 feet (1,200 sq. feet) via invisible infrared technology. When a security breach is detected, the base unit dials the monitoring service, which notifies the owner immediately and if warranted, the authorities.

The master alarm unit, wireless detection unit, and key chain remotes include panic buttons, enabling a consumer to send a distress alert. In cases of a power outage, the master alarm unit features 12 hours of backup battery power. Each wireless motion detector also has a Pet Shield to prevent regular pet activity from triggering false alarms.

Individuals and businesses relocating or in need of a system to monitor a large space will benefit from LaserShield's portability and versatility. Up to 12 wireless motion detectors can be added to expand the system and cover up to 14,400 additional square feet without paying added monitoring fees. Additional wireless motion detectors are sold for \$59.99 each.

In 2007, LaserShield is introducing a special wireless adapter to send a distress signal to the monitoring service over a cell phone frequency for customers without a standard telephone line or for those concerned about an intruder's ability to disrupt phone service. Also in 2007, the Company also will introduce a VoIP adapter for customers with VoIP lines at any location they wish to protect.

"CompUSA is bringing lifesaving technology to its customers in the form of an affordable, off-the-shelf product that makes home security accessible to everyone," said Anthony Dohrmann, CEO, LaserShield Systems. "We have listened to what the police say and have created a system that gets people the help they need – when they are most in need."

LaserShield Starter Kit and Wireless Detection Units are available at **CompUSA stores nationwide**, in addition to select Home Depots and many online stores.

About LaserShield Systems, Inc.

LaserShield Systems, Inc. is the manufacturer of the first plug-and-go security system featuring an alarm plus 24/7 professional monitoring. The system is ideal for homes, apartments, dorm rooms, storage facilities and all types of offices. LaserShield provides proven, affordable and accessible protection against home invasion, burglary and kidnapping for all types of people – women, parents, retirees, college students and business owners.
